CONTINENTAL STONE LIMITED

Continental Stone Limited was formed through a partnership arrangement between Pennecon Ltd. and Central Construction Limited. The parent companies have a combined 90 years experience in the construction and engineering sectors. Since 2001, the shareholders of Central Construction also have been involved in a company in Southwest Florida, Landview Development Ltd., which primarily focuses on residential subdivision construction.

The company's president was instrumental in the establishment of Modern Construction USA, Inc., a Florida-based heavy highway construction company incorporated in 1998. It focuses on road construction and site development. In 2001, Modern Construction USA Inc. later established Superior Asphalt Inc., a subsidiary company which produces and supplies paving and asphalt materials.

Continental Stone Limited has a quarry in Belleoram on the south coast of Newfoundland, with projected capacity to produce six million tons annually for over 50 years. It is expected that initial production in 2007 will be two million tons, with the operation achieving full production within three years.

Products/Services

Continental will produce several classes of aggregate including base, course and fine grades. All three grades of stone can be sized to any required specification. Materials are being supplied in such diverse sizes as 4" x 3/4", 2 1/2" x 1 1/4", 1 1/2" x 3/4", ASTM and DOT construction aggregates, 1/2" x 5/32", -1/4" fines, washed manufacturing concrete fines, and precise chemical sizing as small as - 1/8" washed fines.

Mission Objectives

Continental Stone is interested in establishing partnerships with distributors in the Southeastern states. Company representatives have had preliminary discussions with two major companies in Florida that are interested in purchasing its products.
