Nothing has changed since we last spoke. My sense is that the test blast will not take place until we have cleared the EA process and an industrial permit is in place. At that point we will start collecting baseline acoustic data.

thanks
Paul

Paul,

I'll have a response to you by the end of the week. Has anything changed since we last spoke? Do we have any feel for when you could move forward with the test blast or when you might want to start collecting baseline acoustic data?

Happy New Year,

Scott

Hi Scott,

We spoke a couple of months ago about Bilcon's blast monitoring program. Can you have a look at this question from Fisheries and Oceans Canada and advise?

Many thanks
Paul Buxton

Page 124 – The proponent needs to provide more information on the proposed blast monitoring program (e.g. what equipment will be used, what time of year, impact of water temperature on the results, any observations of seals during blasts and any proposed action if the blast noise levels exceed those predicted in the EIS)
