Dear

RE: Approval No. 2003-032388 to Construct and Operate a Quarry at Tiverton

An inspection of the rehabilitation work at the site was conducted by NSDEL staff on November 15, 2004. The rehabilitation of the site was found to be substantially complete. Grubbings that had been pushed aside during quarry preparation have been replaced to the extent possible. Site contouring with slopes between 1:1 and 2:1 has been completed and is satisfactory. A drainage channel has been provided towards the west with suitable rip rap type sediment catches and discharge to a wet area for dispersal. NSDEL was unable to determine at this time that revegetation has been successful although it is likely that there is sufficient organic material to reestablish growth in time.

Therefore, NSDEL agrees to release Parker Mountain Aggregates from the Rehabilitation Bond that had been submitted in accordance with the Approval. However, release from the bond does not absolve Parker Mountain Aggregates from liability for any present or future adverse environmental effects which NSDEL may not have been aware of at this time. Please note that this Approval was specific for production of rock exclusively for two projects. As those projects are now complete and final rehabilitation is substantially complete no further removal of rock material from this site is permitted.

If you have any specific questions regarding any of the above information, please contact me or Bruce Arthur, P. Eng. at (902) 742-8985.

Sincerely,

Bob Petrie
District Manager
