**Defined Terms** .............................................................................................................................. xxx

**Abbreviations and Acronyms** ....................................................................................................... xxxii

## Chapter 1 — Project Context

1.1 THE LAND ................................................................................................................................. 3

1.2 THE PEOPLE ............................................................................................................................. 4

1.3 THE EVOLVING NORTH ........................................................................................................... 6

1.4 ASPIRATIONS AND APPREHENSIONS ..................................................................................... 7

1.5 THE FUTURE AND SUSTAINABLE DEVELOPMENT .................................................................. 11

## Chapter 2 — Project Description

2.1 Introduction .................................................................................................................................. 15

2.1.1 PROJECT OVERVIEW ........................................................................................................... 15

2.1.2 PROONENTS ...................................................................................................................... 19

2.1.3 CAPACITY ......................................................................................................................... 19

2.1.4 PROJECT SCHEDULE ......................................................................................................... 20

2.2 Major Project Components ........................................................................................................ 24

2.2.1 ANCHOR FIELDS ............................................................................................................... 24

2.2.2 MACKENZIE GATHERING SYSTEM ............................................................................... 30

2.2.3 MACKENZIE VALLEY PIPELINE ..................................................................................... 34

2.2.4 MACKENZIE GAS PROJECT FOOTPRINT ....................................................................... 37

2.2.5 NORTHWEST ALBERTA FACILITIES ............................................................................. 37

2.2.6 PROJECT PRODUCTS ........................................................................................................ 38

2.3 Project Infrastructure .................................................................................................................. 38

2.3.1 CAMPS ............................................................................................................................... 42

2.3.2 POTABLE WATER SUPPLY .............................................................................................. 42

2.3.3 BARGE LANDING SITES .................................................................................................. 42

2.3.4 STOCKPILE AND FUEL STORAGE SITES .................................................................... 42

2.3.5 ROADS ............................................................................................................................. 42

2.3.6 AIRSTRIPS AND HELIPADS ........................................................................................... 42

2.3.7 BORROW SITES .............................................................................................................. 42
CHAPTER 3 — POTENTIAL FUTURE DEVELOPMENTS

3.1 THE PROJECT AS FILED WITH THE PANEL .............................................. 53
3.2 EXPANSION CAPACITY SCENARIO OF THE MACKENZIE VALLEY PIPELINE .... 53
3.3 PROPONENTS' HYPOTHETICAL EXPANSION CAPACITY SCENARIO ............ 54
  3.3.1 GLJ REPORT .................................................................................. 54
  3.3.2 OIL AND GAS MANAGEMENT DIRECTORATE ................................. 54
  3.3.3 PROPONENTS' SCENARIO ............................................................. 56
3.4 OTHER FUTURE SCENARIOS ................................................................. 63
  3.4.1 CANADIAN ARCTIC RESOURCES COMMITTEE'S SUBMISSION ......... 63
  3.4.2 OTHER VIEWS ............................................................................. 68
  3.4.3 "BASIN-OPENING" PROJECT ....................................................... 68
3.5 SUMMARY ......................................................................................... 68

CHAPTER 4 — REVIEW PROCESS

4.1 INTRODUCTION .................................................................................... 73
  4.1.1 JOINT REVIEW PANEL AGREEMENT ........................................... 73
  4.1.2 DOWNSTREAM REGULATORS ....................................................... 74
4.2 ESTABLISHMENT OF THE JOINT REVIEW PANEL ............................. 76
  4.2.1 APPOINTMENT OF THE PANEL .................................................... 76
  4.2.2 APPOINTMENT UNDER SECTION 15 OF THE NATIONAL ENERGY BOARD ACT .... 76
  4.2.3 INDEPENDENCE OF THE JOINT REVIEW PANEL ......................... 76
6.1.3  TERRAIN AND PERMAFROST CONDITIONS IN THE PROJECT REVIEW AREA ................................. 111
6.1.4  PANEL VIEWS .................................................................................................................. 113

6.2  PROPONENTS' APPROACH TO PROJECT DESIGN, CONSTRUCTION AND OPERATIONS .... 114
  6.2.1  PROPONENTS' INFORMATION BASE ............................................................................. 114
  6.2.2  PROPONENTS' DESIGN APPROACH ............................................................................. 116
  6.2.3  DESIGNING FOR GEOHAZARDS .................................................................................. 118
  6.2.4  ROUTING, SITING AND PROJECT FOOTPRINT ................................................................. 119
  6.2.5  PANEL VIEWS ................................................................................................................ 120

6.3  GENERAL DESIGN FOR THERMAL IMPACTS ................................................................. 122
  6.3.1  RIGHT-OF-WAY AND SITE PREPARATION AND RECLAMATION METHODS ............. 123
  6.3.2  PIPELINE OPERATING TEMPERATURE REGIME ......................................................... 126
  6.3.3  CLIMATE CHANGE ....................................................................................................... 128
  6.3.4  PANEL VIEWS ................................................................................................................ 130

6.4  THAW SETTLEMENT ........................................................................................................... 131
  6.4.1  PROPONENTS' VIEWS ................................................................................................... 131
  6.4.2  PARTICIPANTS' VIEWS .................................................................................................. 134
  6.4.3  PANEL VIEWS ................................................................................................................ 137

6.5  SLOPE STABILITY IN PERMAFROST .................................................................................. 138
  6.5.1  PROPONENTS' VIEWS ................................................................................................... 138
  6.5.2  PARTICIPANTS' VIEWS AND RECOMMENDATIONS ...................................................... 141
  6.5.3  PANEL VIEWS ................................................................................................................ 141

6.6  FROST HEAVE, FROST BULBS AND GROUNDWATER FLOW ........................................... 142
  6.6.1  PROPONENTS' VIEWS ................................................................................................... 143
  6.6.2  PARTICIPANTS' VIEWS AND RECOMMENDATIONS ...................................................... 145
  6.6.3  PANEL VIEWS ................................................................................................................ 145

6.7  WATERCOURSE CROSSINGS .............................................................................................. 146
  6.7.1  EXISTING CONDITIONS ................................................................................................. 146
  6.7.2  PROPONENTS' VIEWS ................................................................................................... 146
  6.7.3  PARTICIPANTS' VIEWS .................................................................................................. 149
  6.7.4  PANEL VIEWS ................................................................................................................ 150

6.8  OTHER GEOHAZARDS ........................................................................................................ 151
  6.8.1  SEISMICITY ..................................................................................................................... 151
  6.8.2  ACID-ROCK DRAINAGE ................................................................................................. 151
  6.8.3  KARST TOPOGRAPHY .................................................................................................... 152
  6.8.4  PANEL VIEWS ................................................................................................................ 152

6.9  ANCHOR FIELDS .................................................................................................................. 152
  6.9.1  PERMAFROST AT DEPTH ............................................................................................... 152
  6.9.2  SHALLOW GAS ............................................................................................................... 154
  6.9.3  SEA-LEVEL CHANGE, STORM SURGES AND SUBMERGENCE ..................................... 155
  6.9.4  EXTRACTION-INDUCED SUBSIDENCE ......................................................................... 156

6.10  OVERALL PANEL VIEWS AND RECOMMENDATIONS .................................................. 163
9.8 MARINE MAMMALS ........................................................................................................ 250
  9.8.1 EXISTING CONDITIONS .................................................................................. 250
  9.8.2 PROPONENTS’ VIEWS .................................................................................. 251
  9.8.3 PARTICIPANTS’ VIEWS AND RECOMMENDATIONS ........................................ 253
  9.8.4 PANEL VIEWS AND RECOMMENDATIONS .................................................. 256

9.9 BALLASTWATER DISPOSAL ...................................................................................... 258
  9.9.1 PROPONENTS’ VIEWS .................................................................................. 258
  9.9.2 PARTICIPANTS’ VIEWS AND RECOMMENDATIONS ........................................ 258
  9.9.3 PANEL VIEWS AND RECOMMENDATIONS .................................................. 259

9.10 WATER WITHDRAWAL AND DISCHARGE ............................................................... 260
  9.10.1 PROPONENTS’ VIEWS .................................................................................. 260
  9.10.2 PARTICIPANTS’ VIEWS AND RECOMMENDATIONS ........................................ 262
  9.10.3 PANEL VIEWS .............................................................................................. 262

9.11 FISHERIES MANAGEMENT ...................................................................................... 262
  9.11.1 PROPONENTS’ VIEWS .................................................................................. 262
  9.11.2 PARTICIPANTS’ VIEWS AND RECOMMENDATIONS ........................................ 262
  9.11.3 PANEL VIEWS AND RECOMMENDATION .................................................. 264

---

CHAPTER 10 — WILDLIFE

10.1 INTRODUCTION ....................................................................................................... 269

10.2 IMPACT ASSESSMENT METHODOLOGY .............................................................. 270
  10.2.1 PROPONENTS’ ASSESSMENT METHODS ..................................................... 270
  10.2.2 PANEL VIEWS AND RECOMMENDATION .................................................. 272

10.3 SPECIES AT RISK ................................................................................................. 274
  10.3.1 ASSESSMENT REQUIREMENTS ................................................................... 274
  10.3.2 SELECTION OF SPECIES FOR ASSESSMENT ............................................ 276
  10.3.3 ASSESSMENT METHODS ............................................................................ 277
  10.3.4 IMPACT ASSESSMENT .............................................................................. 278
  10.3.5 CUMULATIVE IMPACT ASSESSMENT ......................................................... 278
  10.3.6 PARTICIPANTS’ VIEWS AND RECOMMENDATIONS ..................................... 279
  10.3.7 PANEL VIEWS AND RECOMMENDATIONS ................................................ 279

10.4 WOODLAND (BOREAL) CARIBOU .................................................................... 282
  10.4.1 EXISTING CONDITIONS ............................................................................... 282
  10.4.2 PROPONENTS’ VIEWS ................................................................................ 286
  10.4.3 PARTICIPANTS’ VIEWS AND RECOMMENDATIONS ..................................... 287
  10.4.4 PANEL VIEWS AND RECOMMENDATION .................................................. 292

10.5 BARREN GROUND CARIBOU .............................................................................. 295
  10.5.1 EXISTING CONDITIONS ............................................................................... 295
  10.5.2 PROPONENTS’ VIEWS ................................................................................ 296

CHAPTER 16 — SOCIAL AND CULTURAL IMPACTS

16.1 INTRODUCTION .............................................................................................................. 487
16.2 APPROACH AND METHODS ..................................................................................... 488
  16.2.1 PROPONENTS’ VIEWS ...................................................................................... 488
  16.2.2 PARTICIPANTS’ VIEWS ................................................................................. 489
  16.2.3 PANEL VIEWS .................................................................................................. 490
16.3 EXISTING CONDITIONS .............................................................................................. 491
  16.3.1 HEALTH, SOCIAL WELL-BEING AND COMMUNITY CONDITIONS .............. 491
  16.3.2 HEALTH CARE, SOCIAL SERVICE AND PROTECTION FACILITIES AND SERVICES 493
16.4 DIRECT PROJECT IMPACTS ....................................................................................... 495
  16.4.1 SOUTHERN WORKERS AND POTENTIAL INTERACTIONS WITH COMMUNITIES IN THE PROJECT REVIEW AREA ............ 495
  16.4.2 PROJECT-INDUCED MIGRATION TO REGIONAL CENTRES .......................... 498
  16.4.3 HEALTH IMPACTS ........................................................................................... 499
16.5 IMPACTS ON COMMUNITIES AND GOVERNMENT SERVICES ............................. 501
  16.5.1 ALCOHOL, DRUGS AND GAMBLING ............................................................ 502
  16.5.2 WELL-BEING CONDITIONS AND SOCIAL SERVICE DELIVERY ............... 507
  16.5.3 POLICING AND SAFETY ............................................................................... 513
  16.5.4 CHILD CARE .................................................................................................... 517
CHAPTER 18 — MONITORING, FOLLOW-UP AND MANAGEMENT PLANS

18.1 INTRODUCTION .................................................................................................. 551
  18.1.1 PURPOSE AND IMPORTANCE OF MONITORING AND FOLLOW-UP .......... 551
  18.1.2 TYPES OF MONITORING ................................................................. 552

18.2 PROJECT MONITORING AND FOLLOW-UP ....................................................... 553
  18.2.1 BIOPHYSICAL MONITORING ............................................................ 553
  18.2.2 SOCIO-ECONOMIC MONITORING ..................................................... 558
  18.2.3 GOVERNMENT AND OTHER INSTITUTIONAL ROLES ......................... 562
  18.2.4 PANEL VIEWS AND RECOMMENDATIONS ........................................ 565

18.3 CUMULATIVE IMPACTS MONITORING AND MANAGEMENT ......................... 571
  18.3.1 EXISTING CONDITIONS ................................................................. 571
  18.3.2 CUMULATIVE IMPACTS MANAGEMENT ............................................. 572
  18.3.3 CUMULATIVE IMPACTS OF FUTURE DEVELOPMENTS ......................... 574
  18.3.4 PANEL VIEWS AND RECOMMENDATIONS ........................................ 576
  18.3.5 FOLLOW-UP PROGRAM FOR CUMULATIVE IMPACTS MANAGEMENT AND MONITORING .......................................................... 578

CHAPTER 19 — SUSTAINABILITY AND NET CONTRIBUTION

19.1 INTRODUCTION ................................................................................................. 585

19.2 APPROACH ........................................................................................................ 586

19.3 THE CORE QUESTION ....................................................................................... 586

19.4 THE SCOPE OF DEVELOPMENTS TO BE ASSESSED ..................................... 586

19.5 KEY SUSTAINABILITY ISSUES ........................................................................ 589

19.6 SUMMARY OF PANEL ANALYSIS OF THE FIVE KEY SUSTAINABILITY ISSUES CATEGORIES .............................................................. 590
  19.6.1 CUMULATIVE IMPACTS ON THE BIOPHYSICAL ENVIRONMENT .......... 591
  19.6.2 CUMULATIVE IMPACTS ON THE HUMAN ENVIRONMENT .................... 595
  19.6.3 EQUITY IMPACTS ............................................................................. 599
  19.6.4 LEGACY AND BRIDGING IMPACTS ................................................... 602
  19.6.5 CUMULATIVE IMPACTS MANAGEMENT AND PREPAREDNESS .......... 604
  19.6.6 INTERACTION OF PROJECT IMPACTS .............................................. 606

19.7 EVALUATION OF THE PROJECT'S CONTRIBUTION TO SUSTAINABILITY .... 608
  19.7.1 THE PROJECT AS FILED WITH A THROUGHPUT OF 0.83 BCF/D .............. 608
  19.7.2 THE PROJECT AS FILED WITH EXPANDED THROUGHPUT IN THE RANGE OF 0.83 TO 1.2 BCF/D ................................................. 609
  19.7.3 THE PROJECT AS FILED EXPANDED IN THE RANGE FROM 1.2 BCF/D TO ITS DESIGN CAPACITY OF 1.8 BCF/D .......................................... 610
  19.7.4 THE PROJECT AS FILED AND OTHER FUTURE SCENARIOS ............. 611
  19.7.5 THE NULL ALTERNATIVE .................................................................... 612

APPENDIX 11: GLOSSARY ....................................................................................................... 672
that initial predictions of development intensity and impacts were an underestimate of what actually occurred. The Alaskan case demonstrated the failures of regulators to protect valued wildlife resources when a project-specific (case-by-case) regulatory approach with a focus on the immediate project footprint (similar to the approach taken by the MGP Proponent) was taken.

The WWF pointed to adverse impacts on wildlife in Alberta (e.g., woodland caribou, grizzly bear, other species at risk) as an example of the consequence of an improper cumulative impact assessment or planning for sustainability of VCs.

In the WWF’s view, a moratorium on development should be recommended while land use plans were developed. This approach would encourage governments to give attention and priority to these matters. Alternatively, WWF proposed that project approval could be given, conditional upon the completion of work to address future cumulative effects, such as scenario development and cumulative effects analysis.

Participant Ms. Tasha Stephenson commented on the failures of the Proponents’ cumulative impacts assessment. She expressed the view that the Proponents had avoided discussion of the impacts of Project-induced developments except when they could be presented as a benefit of the Project. As a basin opening activity, the MGP was presented in the context of economic development and revenue generation. However, Ms. Stephenson suggested that in the context of adverse cumulative effects, the Proponents indicated that the prediction of induced development was difficult and unlikely to occur. She expressed concern that, in the absence of planning, the scale and pace of unbridled pipeline development would be devastating to the area. Additionally, she agreed with a number of other parties that scenario assessments must be performed to evaluate the full cumulative impacts of the MGP.

Sierra Legal Defence Fund on behalf of the Sierra Club of Canada and the World Wildlife Fund filed a motion requesting the Panel to:

- commission an independent scenario-based cumulative effects assessment (CEA) in accordance with the Greig and Duinker report; and
- ensure that the scenario-based CEA report was distributed in advance of the Panel’s hearing on cumulative effects.

Many participants filed positions in favour of and against the motion. The Panel denied the motion on two grounds. Firstly, the Sierra Legal Defence Fund had misinterpreted the recommendations made in the Greig-Duinker report with respect to timing. Secondly, although the Greig-Duinker Report had been commissioned by the Panel, it had not been fully tested in a hearing before the Panel. A future hearing was already scheduled to focus specifically on the issue of cumulative impact assessment and many of the matters raised in the Sierra Legal Defence Fund motion. The Panel was of the view that it would not be proper for it to make a ruling on a recommendation that had not been fully tested.

18.3.4 PANEL VIEWS AND RECOMMENDATIONS

IMPLEMENTATION OF THE CUMULATIVE IMPACTS MONITORING REGIME

The Panel heard widespread concerns about the regional cumulative impacts that could result from the Project in combination with other developments, particularly developments that might be induced by the Project and the ability to manage those cumulative impacts. In many respects, this was the central issue of the Panel’s hearings.

The Panel notes that the purpose of the MVRMA is to provide for an integrated system of land and water management in the Mackenzie Valley. The government is required to undertake a number of activities for the purpose of monitoring the cumulative impacts on the environment of developments in the NWT. Although preliminary work has been undertaken for the NWT CIMP, this program is not yet fully established or funded. While it is a work-in-progress and continues to evolve, the implications associated with continued failure to implement CIMP were succinctly stated in the 2005 audit report:

> The absence of systematic approaches to identify, evaluate and respond to regional/territorial cumulative effects was identified as one of the most common reasons that projects are referred to Environmental Assessment. Regulatory decision-makers lack the tools necessary to make informed planning and approval decisions based on the regional/territorial cumulative effects of projects. This gap is tied directly to the absence of land use plans and a fully implemented CIMP. (JINAC-00065, p. 7)

Many participants called on the Panel to provide substantive direction on matters of design and implementation related to cumulative impacts assessment, management and monitoring in the Beaufort Delta and Mackenzie Valley.

In the Panel’s view, the foundation already exists in the MVRMA to manage, on a comprehensive and integrated basis, the land and water of the Mackenzie Valley. Significant effort has been devoted to the planning for the CIMP and the linkages it would have with other programs. Some of those other programs, such as land use plans, are under the provisions of the MVRMA. Other programs, such as protection of areas of high conservation values, are outside the regime created under the MVRMA but are under the purview of other legislation, and equally critical to the overall northern expectations for maintaining ecological integrity throughout the NWT. The need for completion of these latter two initiatives has been noted and is the subject of recommendations from the Panel in Chapter 11, “Conservation Management and Protected Areas.”

The Panel heard extensively about the uneven and incomplete implementation of this regime and how the absence of some of the components is compromising the effectiveness of the management system as a whole. The Panel is of the view that
it is imperative that all components of the regime be in place and functional so as to effectively manage the impacts and cumulative impacts arising from a project of the magnitude and geographic scope of the Mackenzie Gas Project. If the Project were to proceed in the absence of the entirety of this system, there is a strong risk that neither the necessary baseline against which to monitor Project impacts and cumulative impacts nor the monitoring programs necessary for adaptive management would be in place for effective management of the Project’s cumulative impacts.

For the CIMP to be fully effective, a strong government commitment to the program is required. The Panel observes that the key hurdles to the full implementation of the MVRMA include the following:

- **Establishment of CIMP** — while there has been a great deal of time and resources devoted to the preliminary planning for the CIMP, the focus must now shift to the formal establishment and implementation of the CIMP.

- **Delegation of a responsible authority for CIMP** — the Minister of DIAND has not yet designated a Responsible Authority under the MVRMA, to undertake activities for the purpose of monitoring cumulative impacts on the environment. Without a responsible authority designated to be responsible and accountable for its successful implementation, CIMP will not be able to achieve its monitoring and management goals.

- **Application of CIMP to the ISR** — the Panel notes that the application of CIMP has been extended to the ISR by a Memorandum of Understanding and that the Inuvialuit currently participate as full members in the CIMP working group. However, given that many of the cumulative impacts would occur within the ISR, the Panel questions whether an administrative agreement is a sufficiently robust instrument to ensure the implementation of CIMP within the ISR. Ideally, the application of CIMP would be extended to the ISR by legislation so that it would apply on the same legal footing throughout the Northwest Territories.

- **Fulfillment of legal obligation to enable CIMP** — the lack of secure long-term funding for CIMP is another obstacle that has impeded the establishment and implementation of CIMP.

- **Contents of the CIMP program** — establishment of the CIMP would benefit from clear guidance with respect to the program design. It would also benefit if the design of the CIMP research were informed by the analysis of scenarios of possible future development in the NWT. CIMP’s effectiveness would also be enhanced through the establishment of thresholds, as discussed in Chapter 11, to determine if and when management actions were needed.

In the Panel’s view, monitoring of regional cumulative impacts requires a dedicated, focused and integrated program of activity over many years. This must be the work of competent professionals, but in the context of the Project Review Area, local involvement in program design and execution is also essential. It follows that such a program requires a long-term and secure source of funding, consistent direction and management, the retention of key personnel and the use of expert advisory personnel as required. These conditions are unlikely to be met by simply adding responsibilities to personnel or units within government agencies that are primarily responsible for the delivery of ongoing programs or that have ongoing regulatory responsibilities. Initial funding allocations with no secure continuity are also likely to be counterproductive. Public confidence in monitoring results and assessment will likely be enhanced if the responsible agency is at arm’s length from day-to-day policy or regulatory activity.

The CIMP should have, in addition to a governing board, a technical committee of experts from such federal agencies as EC and DFO, and from such territorial agencies as Environment and Natural Resources and the NWT Bureau of Statistics that could also obtain external expert advice as required.

The Panel therefore makes the following recommendations:

**RECOMMENDATION 18-12**

The Panel recommends that, within six months of the date of the Government Response to the Panel’s Report, the Minister of Indian Affairs and Northern Development take the steps necessary to complete the establishment of the Cumulative Impact Monitoring Program and appoint a Responsible Authority as required under the Mackenzie Valley Resource Management Act.

**RECOMMENDATION 18-13**

The Panel recommends that the Minister of Indian Affairs and Northern Development consider appointing, as the Responsible Authority for the Cumulative Impact Monitoring Program under the Mackenzie Valley Resource Management Act, a corporate entity with a board consisting of one representative from each region in the Northwest Territories and representation from the appropriate government departments of Canada and the Northwest Territories. The Panel also recommends that the Responsible Authority for the Cumulative Impact Monitoring Program have a technical committee and a full-time secretariat to support the board.

**RECOMMENDATION 18-14**

The Panel recommends that, within six months of the date of the Government Response to the Panel’s Report, the Minister of Indian Affairs and Northern Development take all reasonable steps to extend the legal application of the Cumulative Impact Monitoring Program into the Inuvialuit Settlement Region, thereby making the program a legal requirement throughout the Northwest Territories.

**RECOMMENDATION 18-15**

The Panel recommends that, within six months of the date of the Government Response to the Panel’s Report, the Government of Canada make available sufficient long-term stable funding to implement.
the Cumulative Impact Monitoring Program as specified in Panel Recommendation 18-16 and as required by law.

**RECOMMENDATION 18-16**

The Panel recommends that when establishing the Cumulative Impact Monitoring Program (CIMP), the Minister of Indian Affairs and Northern Development authorize the CIMP Responsible Authority to do the following:

- establish an integrated set of biophysical and socio-economic indicators for the entire Northwest Territories;
- establish an integrated set of thresholds for evaluating cumulative impacts and levels of acceptable change in the biophysical and the socio-economic environments;
- establish a program for conducting scenario-based cumulative impacts assessments;
- establish a program for monitoring the interaction of cumulative impacts on multiple valued components;
- establish Traditional Knowledge study programs;
- provide guidance to impact assessment monitoring programs of the Mackenzie Gas Project and other activities regarding the form in which data is to be collected and provided to the CIMP;
- establish protocols for data access, control and release;
- establish a program for reporting monitoring results to appropriate agencies at a time and frequency that meets the need of the particular agency including the provision of results of the CIMP to the Mackenzie Valley Environmental Impact Review Board, Land Use Planning Boards, NWT Oil and Gas Socio-Economic Advisory Board, Corporation for the Mitigation of Mackenzie Gas Project Impacts, regulators, government departments and renewable resource management agencies for the purpose of informing the decisions of those agencies; and
- provide guidance to the Land Use Planning bodies on cumulative impact thresholds.

During the hearings one particular area of cumulative impacts monitoring was brought forward by the Fisheries Joint Management Committee. The FJMC recommended an integrated long-term aquatic monitoring program for the Mackenzie River watershed. The Panel agrees and considers that it would be properly housed within the CIMP. Therefore the Panel makes the following recommendation.

**RECOMMENDATION 18-17**

The Panel recommends that the Cumulative Impact Monitoring Program establish a program for integrated long-term aquatic monitoring of the Mackenzie River watershed that is consistent with and contributes to the Canadian Aquatic Biomonitoring Network.

**18.3.5 FOLLOW-UP PROGRAM FOR CUMULATIVE IMPACTS MANAGEMENT AND MONITORING**

In considering the requirements of a follow-up program for the MGP, the Panel has taken into account CEAA's Operational Policy Statement, which gives attention to the management of cumulative impacts. Pursuant to the CEA Act and the MVRMA, the purpose of a follow-up program is to establish the necessary measures to verify the accuracy of a project's predicted impacts and to determine the effectiveness of mitigation measures.

Of particular relevance to the MGP are the following provisions of the OPS that state that a follow-up program is also used to:

- support adaptive management measures;
- provide information on environmental effects and mitigation that can be used to improve and support environmental assessment of future projects and their cumulative effects; and
- support environmental management systems in the management of environmental effects. (OPS, p. 2)

The demands on cumulative impacts management are particularly challenging for the MGP given its scale, the possibilities for further developments that might follow, the limited capacity of regional management agencies, and the lack of established cumulative impacts thresholds and sources of monitoring information. These elements are all criteria listed in the OPS for consideration of a follow-up program. The Panel has considered the ability of governments and other agencies to anticipate, monitor and manage the cumulative impacts of the Project. This includes the impacts associated with the pace and scale of development and climate change, and applies at a Project-specific and cumulative, regional scale.

In the Panel's view, CIMP provides a logical platform from and within which to implement the recommended follow-up program for the assessment, monitoring and management of the MGP's cumulative impacts. This view assumes the acceptance of the Panel's recommendations for the full implementation of CIMP as presented above.

While individual Proponents have a role to play in contributing Project-specific impacts monitoring results to the Panel's recommended follow-up program, the key responsibility for collecting and analyzing the results from the Project's cumulative impacts would rest with the CIMP Responsible Authority. Actual management actions in relation to cumulative impacts identified through such analysis, would be the responsibility of the appropriate regulators, including the regulators that would oversee implementation by the Proponents of the appropriate adaptive management measures to accommodate and make adjustments in response to these results. Figure 18-4 shows the relationship between the follow-up program for the Project, the CIMP and project-specific follow-up programs for other projects in the NWT.
SCENARIO CUMULATIVE IMPACT ASSESSMENT

Throughout the Panel’s Report, the Expansion Capacity Scenario and Other Future Developments Scenario describe the scope of future developments identified by many participants in the Panel’s hearings as developments that might generate cumulative impacts induced by, or in addition to, the MGP. The Panel heard many concerns with respect to the uncertainty of the pace, scale and distribution of future developments in the NWT and recognizes that future developments on too large a scale or too rapid a pace could have detrimental impacts. Similarly, further development activities beyond the Project as Filed will be needed at appropriate times to maintain sustainable benefits to the people of the NWT.

At the same time, the Panel notes that the Canadian economic and political system is fundamentally one that responds to development initiatives of non-government entities. The current Canadian regulatory framework, generally speaking, is not intended to dictate or to control the pace and scale of resource developments except where there is a determination that the adverse environmental or socio-economic impacts of such developments are likely to be significant and cannot be justified.

Given this essentially reactive role of regulators, it is critical that they be aware of potential development scenarios and can anticipate them by being prepared and equipped to respond to proposed specific developments when they are proposed. In the Panel’s view, the scenario-based cumulative effects assessment that is recommended by the Panel is an essential anticipatory undertaking to ensure that the regulators are so prepared.

The Panel views a scenario-based cumulative impacts assessment of the MGP as an important tool in the identification of potential cumulative impacts as well as the suite of corresponding management measures that can be deployed to enhance positive effects or avoid or minimize negative
cumulative impacts that might arise from the Project and other future developments. The Panel understands scenario-based cumulative impacts assessment to be an important planning exercise that could inform the design and focus of the MGP’s cumulative impact monitoring program. In addition, in later years it could provide important information to the transition planning and bridging initiatives contributing to sustainability as discussed in Chapter 15, “Economic Impacts.” As scenario-based assessments are not a prediction of an exact future development scenario, but an anticipatory planning tool for identifying plausible scenarios, review and revision of these scenarios periodically would assist in confirming the priorities and guiding the scope of the MGP’s cumulative impact monitoring program.

RECOMMENDATION 18-18

The Panel recommends that the cumulative impact components of the follow-up program for the Mackenzie Gas Project be conducted within the operational framework of and under the guidance of the Responsible Authority for the Cumulative Impact Monitoring Program.

RECOMMENDATION 18-19

The Panel recommends that the follow-up program for the Mackenzie Gas Project include a scenario-based cumulative impacts assessment for the Mackenzie Gas Project in combination with other developments that:

- identifies plausible scenarios of development that could be induced by the Mackenzie Gas Project, including consideration of those formally presented to the Panel by hearing participants, and that give explicit attention to impacts from climate change;
- focuses on the sustainability of valued components in the human and biophysical environments and identifies anticipated cumulative impacts (positive and negative);
- identifies priority valued components to be monitored in the follow-up program;
- includes the full spatial extent of the Mackenzie Valley from the Proponents’ Anchor Fields and adjacent areas in the Mackenzie Delta to the Alberta border and reflects the geological potential of areas for future development;
- includes as its temporal scale the anticipated life of the Mackenzie Gas Project and beyond decommissioning;
- is informed by relevant audit reports;
- is conducted by an independent facilitator and designed with the appropriate expertise; and
- includes the participation of the appropriate stakeholders.

The Panel further recommends that the first scenario-based cumulative impacts assessment for the Mackenzie Gas Project be initiated within six months of the designation of the Responsible Authority for the Cumulative Impact Monitoring Program and that it be reviewed and revised every three years thereafter for the life of the Mackenzie Gas Project.

CUMULATIVE IMPACTS MONITORING AND MANAGEMENT

In the Panel’s view an effective follow-up program for the monitoring and management of cumulative impacts depends on a number of key elements that, taken together, constitute a coordinated approach for anticipating, monitoring and managing the cumulative impacts of the MGP. Those elements include:

- the results of a scenario-based cumulative impacts assessment of the MGP to guide the design of an MGP cumulative impact monitoring program;
- the use of the Proponents’ Project-specific impacts monitoring data, and related monitoring data from other projects, which may be induced by the MGP, and its integration with other cumulative impact monitoring data gathered by governments and other entities; and
- the application of the results of the scenario-based cumulative impacts assessment and the MGP cumulative impact monitoring program to inform the regulators, the environmental assessment and permitting of future developments, and future transition planning.

RECOMMENDATION 18-20

The Panel recommends that the Department of Indian Affairs and Northern Development require the follow-up program for the Mackenzie Gas Project to establish and conduct a Mackenzie Gas Project cumulative impact monitoring program that:

- reflects the priority valued components and indicators identified by the scenario-based cumulative impacts assessment;
- requires governments, Aboriginal authorities and the Proponents to develop and design integrated research protocols for the Mackenzie Gas Project that meet the monitoring needs for Project impact monitoring and cumulative impact monitoring;
- identifies the indicators for which data will be required for the Mackenzie Gas Project cumulative impacts follow-up program;
- includes as appropriate:
  - select regional or community Traditional Knowledge studies;
  - Project-specific impact monitoring information provided by the Mackenzie Gas Project and regulators;
  - interaction of cumulative impacts on multiple valued components; and
- is designed in conformity with the provisions of Panel Recommendation 18-3.

The results of the Mackenzie Gas Project scenario-based cumulative impacts assessment and monitoring programs should be transmitted to downstream regulators, government agencies, Land Use Planning bodies, the NWT Oil and Gas Socio-Economic Advisory Board, and the Corporation for the Mitigation of Mackenzie Gas Project Impacts for the analysis of cumulative impacts and, for the purpose of transition planning, the Government of the Northwest Territories.
RECOMMENDATION 18-21
The Panel recommends that regulators, as a condition of any approvals or permits they might issue for activities and projects, require all proponents of future developments that would enable the throughput of the Mackenzie Valley Pipeline to be increased above 0.83 Bscf/d to provide relevant impact monitoring data to the cumulative impacts monitoring program.

EFFECTIVENESS OF CUMULATIVE IMPACTS ASSESSMENT, MONITORING AND MANAGEMENT
The Panel heard a high level of concern throughout its hearings about the management of cumulative impacts resulting from the MGP, particularly those that may result from future induced developments and the unfulfilled requirements of the MVRMA for a cumulative impact monitoring program in the Mackenzie Valley. The Panel is of the view that it is crucial that there be independent oversight and evaluation of effectiveness of the MGP’s cumulative impact monitoring program. In the Panel’s view, the Audit established under the MVRMA is well-suited to this purpose.

RECOMMENDATION 18-22
The Panel recommends that the Minister of Indian Affairs and Northern Development, as part of the follow-up program, require a Project-specific audit pursuant to section 148 of the Mackenzie Valley Resource Management Act each year during construction and at least once every five years for the life of the Mackenzie Gas Project to assess the effectiveness of the impacts monitoring regime for the Project. There may be more than one audit in any given year and an audit may focus on one or more component of the Mackenzie Gas Project.
