Construction Begins at McInnis Cement’s Bronx Terminal

BRONX, NY/April 19, 2017 – Work is underway at McInnis Cement’s N terminal. The site in the South Bronx is part of McInnis’ network of terminals strategically located throughout the eastern portion of North America and their access to efficient waterways, as well as their proximity to the mark minimize truck miles to its customers.

A New Development Standard

When completed, the 74,600-square-foot terminal in the Bronx will feature a warehouse that can store 43,000 tons of cement and load up to 80 trucks. Cement will be delivered to the Bronx from McInnis’ plant in Port-Daniel—Quebec. A barge-mounted ship unloader travelling between New York and Providence will be used to pneumatically transfer the cement into the warehouse.

This facility will set a new standard for development in the New York City featuring 24/7 operations to best serve its local market. A rooftop solar array will reduce strains on the local power and a fully enclosed truckload out will minimize dust. The around-the-clock operations in conjunction with the terminal’s proximity to concrete plants will dramatically reduce truck traffic and associated emissions in the Bronx.

In the future, the area is expected to see more than $60 billion in infrastructure projects and another $7.7 billion in Superstorm Sandy repairs, creating a needed demand for concrete. The Bronx terminal will allow McInnis customers to participate in these projects while reducing their transportation costs and environmental impact.
Regaining Access to the East River

The property at the Bronx terminal has a long history with many uses over years, including a 19th century amusement park and a float yard to move laden with coal, construction materials and daily consumables for transport Manhattan and Long Island. This facility had lain dormant and fallen into as an illegal city dump for a number of years until it was rejuvenated by an innovative entrepreneur. Extensive remediation efforts were made to transform the multi-acre property into a sustainable site. Inserted between the terminal and protected wetlands is a new quarter-mile segment of the South Bronx Greenway which includes a bike and pedestrian path. This path is an integral part of the McInnis development and will allow the local population to regain access to the River.

“We are very excited to being one step closer to delivering cement to our customers in this area and along the east coast,” said McInnis Cement CEO Herve M. “Once complete, the facility will set a new standard for development in the South Bronx, placing in harmony an industrial operation, with a natural habitat and waterfront access for citizens of the South Bronx.”

About McInnis Cement – The New Cement Company

McInnis Cement is a privately-held company with corporate headquarters in Canada, and United States headquarters in Stamford, Connecticut. The new plant in Port-Daniel–Gascons, Canada is the first new plant to serve eastern Canada as well as the U.S. Eastern seaboard and Great Lakes region in more than 50 years. McInnis Cement has constructed a deep-water marine terminal, adjacent to the plant, and operates its own distribution network consisting of terminals strategically located in the U.S. and Canada. This will allow products to be quickly and efficiently delivered to markets along the East Coast and the entire perimeter of the Atlantic Ocean.

As the newest entrant in the North American cement market, the company is committed to supplying its customers with superior-quality products that are consistent and reliably distributed, based on sustainable development principles and the use of advanced technology which will enable the McInnis Cement plant to meet or exceed, the most stringent environmental standards, making its ecological footprint one of the smallest in the cement industry. More information is available at ciment.mcinnis and mcinniscement.com/en.
