**Corporate and social responsibility ('CSR') review**

**Health and safety**

**Our approach**

JKX’s Health, Safety, Environment, Community and Quality (HSECQ) philosophies are embedded into its Policy Statements which are endorsed by the Board and made known to all employees and business partners. The statements represent the Company’s commitment to a safe and healthy incident free, working environment and its responsibility to prevent damage to the environment, our employees and neighbours. JXK will never knowingly compromise its health, safety, environmental or quality standards to meet operational objectives.

**Health and safety statistics**

In 2015, JKX implemented and communicated its improved HSECQ policy at all operations worldwide. This policy represents a clear statement of core principles and the approach to health and safety management at all Group companies.

The priority is to ensure that all staff and contractors work in a safe environment, where effective systems of work are maintained and appropriate procedures and processes are followed.

**Continuous improvement in health and safety**

Annual HSECQ targets are set for all levels within the organisation. During 2015, JKX achieved an AIFR of 0.15 per 200,000 hours worked with 165 days away from work recorded. The industry benchmark set by the IOGP was an AIFR of 1.6 per million hours worked. The reporting of incidents during 2015 continued, demonstrating that all statistics are reported whether good or bad.

With more than 750 personnel during 2015, JKX reported 56 incidents.

**Our safety statistics for 2015**

Measurement and analysis of JKX’s safety statistics is carried out on a monthly basis with the results communicated to senior management of all group companies and the Board.

There were no recorded lost time injuries (2014: 6). This year JKX sadly suffered a fatality during must-mud operations. A Root Cause Analysis was carried out for this incident with the lessons learned distributed across the Group to ensure no such incident occurs again.

Employees are included in structured training and behavioural programs which promote open discussion and employee surveys are conducted annually. JKX has a clear Safety Management System, which provides a comprehensive and systematic view of its objectives.

Each site has its own HSECQ Management System identifying all major hazards and risks to personnel specific to the unique nature of the country of operation.

In occupational health, the drug and alcohol policy continues to be successful throughout the Group with no instances of breaches noted. The policy applies to all JKX staff and contractors and forbids the possession and/or use of defined prohibited substances which includes drugs and alcohol.

A Lead Drilling and Workover Engineer is based at the London office who reports directly to the Board and is responsible for the planning, reviewing and authorising of Group drilling and workover operations, this significantly strengthens the capability to identify and manage drilling risk. A daily drilling update is provided to the Board for all JKX operations which describes drilling progress, issues and expectations for the following 24 hours.

**Drilling risks**

JKX recognises that the safety and efficiency of drilling and workover operations depends primarily on the performance of its employees and contractors. Local staff with decades of local experience are used on our drilling rigs who are supported by expatriate supervisors to provide additional, separate and oversight. This enables us to define and manage risk more clearly using Western methodologies.

JKX drilling and workover employees and contractors have the necessary training and certification in safety, health and control, and all personnel have the authority to stop any job that they deem unsafe.

Supervisors are selected for their expertise as well as for their familiarity with the regions where JKX operates. They understand and are sensitive to local working practices and culture, and work to enhance the education and training of local staff and contractors alike.

JKX makes the best use of its resources by sharing expertise between operating companies using a strong collaborative environment where everybody contributes to analyse the risks and develop mitigating strategies in order to minimise it.

**Health and safety risk management**

JKX is proud to have maintained accreditations for compliance with:

- OHSAS 18001 Health & Safety
- ISO 14001 Environmental
- ISO 9001 Quality Management

These are internationally-recognised specifications for occupational health and safety environmental and quality management systems monitored by experienced auditors bi-annually to ensure compliance to the standards. The list below is a sample of 3rd party inspection activities in 2015. A full report of all inspections is available on request.

**3rd Party Inspections during 2015**

- PPC, Ukraine
- Expert organization: NF Promsvyvdiagnostika
- Expert organization: PP Energomash
- State Labour Board, Poltava region
- Office of the Federal Service for Ecological, Technological and Atomic Supervision (Rostekhnadzor)
- Association of independent experts of Ukraine Ukrexpert
- Federal Service for the Supervision of Natural Resources YGE, Russia
- North Caucasus Office of the Federal Service for Ecological, Technological and Atomic Supervision (Rostekhnadzor)

New FDP targets 600 billion cubic feet

- Updated field development plans focus on the Rudenkivske field in Poltava
- Technically recoverable reserves of 600 billion cubic feet (17 billion cubic metres)
- Plateau production of 18,300 boepd

PRODUCTION
Technological revolution
The past 10 years sees tight oil plays production increase by 15 times.

LEGAL
Tribunal award
An opportunity to resolve historical legal issues.

MINDSET
“What’s possible?” unleashes latent talent
Tom updates the philosophy of the new JKX and sets the mindset.

TARGETS
135 wells and total investment of $660 million
JKX will bring the capital and technology to start our own gas revolution, but Ukraine also needs to do its part.

POLITICS
29% gas tax rate blocks progress
12% would open the gas market to global energy investors and operators.

STRATEGY
All seeing the same picture
Extreme transparency, the way forward.
enquiry and believe that PPC is in full legal compliance with all relevant Ukrainian law and regulation. These searches have been a significant distraction for the Board and JKX staff, and damaging to Ukraine’s investment climate. We have engaged with both the US and UK embassies in Kiev in order to register our complaints in this matter.

We have commenced the settlement process with the Government in Ukraine to settle the arbitration award and the local tax issues so that the Company can return its focus to key operational matters.

UKRAINE
Production licenses secured
In January 2016, the State Geology and Mineral Resources Survey of Ukraine suspended four of PPC’s subsalt use permits. The authority gave a list of actions that were required in order to cancel the suspension (including a change to the minimum production requirements under the license) and would normally have given the operator sufficient time to remedy the failings. Instead PPC was given only one month to do so.

Following successful legal action, PPC has now renewed all four of these licenses until 2024 and also received a ruling from the Kharkiv Administration Court of Appeal which deemed the original suspensions to have been illegal.

Rebuilding of Field Development Plans (‘FDPs’)
Our reconstructed Field Development Plans revealed that applying modern technology and techniques in well construction and field development design, our Rudenivske gas field has much greater potential than was previously considered economic. Further details of the FDPs are provided in The Chief Executive’s statement on pages 6 to 10.

FINANCIAL
Bond repayment and restructuring
Through 2016, we reduced the principal amount of outstanding bonds from $166 million to $16 million. This was achieved through a $16 million scheduled repayment in February and various market purchases of bonds at a principal amount of $10 million at various discounts to face value.

On January 3 2017 the Bondholders approved a restructuring of the remaining $16 million of Bonds, the detail of which is provided in the Financial Review on pages 19 to 21. The repayment of the Bonds is now well within the operating cash flow capabilities of the Company enabling the business to move forward with its development plans.

Reducing operating costs and overheads
Measures were taken immediately following the appointment of the new Board in January 2016 to significantly reduce the cost burden of the Company’s London headquarters, reducing headcount and moving all remaining staff onto one floor of the building, where we previously occupied four floors.

We have been able to extract ourselves from the long-term lease on one of the unoccupied floors and continue negotiations with the landlord to extract the Company from the long-term lease agreements on the other two floors.

During 2016, headcount reductions have been made in Ukraine and Russia of 18% and 14%, respectively. The benefits of our cost reduction actions during 2016 will be seen in 2017 and we continue to identify further cost-saving opportunities.

GROUP
Your Board
Following the replacement of the entire Board on 28 January 2016, the composition of the Board did not comply with the UK Corporate Governance Code in respect of the number of independent Non-Executive Directors. To address this, in April, two new independent Non-Executive Directors were appointed.

Alan Bigman and Berne Sucher both bring extensive knowledge of working at the highest levels in the region combined with directly relevant experience which will be of great benefit to the Company. As independent directors, Alan and Berne have strengthened the corporate governance credentials of the Company which ensures that the interests of all shareholders are protected.

At the Company’s AGM on 28 June 2016, the resolutions to accept the appointment of Alan and Berne were rejected by a small number of shareholders but with enough votes to prevent the resolutions being passed. Given the very low turnout of voting shareholders, the fact that the vast majority of voting shareholders were in favour of the appointments and the need for value-adding independent directors, the Board re-appointed both Alan and Berne at a subsequent Board Meeting. The shareholders will be asked to approve these appointments at the next Annual General Meeting. The result of last year’s AGM underlines that if shareholders want to ensure a high-quality board and good governance, they must exercise their right to vote at General Meetings.

MINDSET
People
The Board continues to be impressed and often humbled by the level of dedication, talent, and perseverance shown by staff throughout the Group, especially during a year in which we were trying to drive such significant change. We believe that our teams are capable of accomplishing market leadership in our field, and much more.

POTENTIAL
The road ahead
We are working with the Ukrainian Government to amicably settle all claims and secure support in creating an environment in which JKX can execute its Field Development Plans, invest in gas production and assist Ukraine to achieve energy independence. 2016 began with some major changes at the board level, and uncertainty with regards to our future. Yet we endured that uncertainty, increased production, improved relationships with our stakeholders and have more focused teams with a clearer understanding of our organisational and technical challenges. We achieved some significant gains during 2016 but have also suffered some setbacks. With a renewed purpose, strategic focus and the right people in the right places, we enter 2017 with optimism.

Finally, I wish to thank all our shareholders and staff for their support of the Company and the new Board through this year of challenging transformation. We have achieved a significant amount in our first 12 months, but relish the challenges and opportunities that 2017 presents.

Paul Ostling
Chairman
Regional operations update

**GROUP PRODUCTION**

In 2016 Group average production was 10,083 boepd (2015: 8,996 boepd), comprising 547 MMcf/d of gas (2015: 487 MMcf/d) and 967 bpd of oil and condensate (2015: 871 bpd), an overall increase in production of 12%.

**UKRAINE**

**Novomykolaivske licences**

**Production**

Average production from the Novomykolaivske group of fields in 2016 was 2,552 boepd (2015: 2,611 boepd) comprising 10.0 MMcf/d of gas (2015: 10.9 MMcf/d) and 879 bpd of oil and condensate (2015: 794 bpd). Despite the cancellation of all development expenditure since early 2015, oil production increased by 11% in 2016 while gas production decreased by 8%, although the decline in gas production has to be viewed in the context of a declining field and lack of an effective development plan in the first half of the year. We have implemented an enhancement program targeting the technical potential of existing well stock which has resulted in the increase in oil production and enabled a smaller reduction in gas production than would otherwise have been the case. The decline in gas is mainly attributed to a year on year natural decline of 1.5 MMcf/d observed in the Ignativske field.

**Development and drilling**

No drilling took place in 2016 as the new board continued to focus on the existing well stock to enhance production. A reserves audit was carried out by Degoyler and MacNaughton in 2016 which increased total 2P reserves for the field to 80.3 MMboe (2015: 66.1 MMboe). Proved reserves have been slightly reduced, due to higher resolution geological modeling showing slightly less drainage area. Probable reserve categories have increased due to the undertaking of numerous activity in the new Callivinov well, which is planned for 2018, and net pay maps revealing volumes previously not accounted for by material balance.

**Elyzavetivske production licence**

**Production**

Average production from the Elyzavetivske field in 2016 was 1,448 boepd (2015: 1,715 boepd) comprised of 5.2 MMcf/d of gas (2015: 5.6 MMcf/d) and 23 bpd of condensate (2015: 28 bpd), an over 16% decrease in production.

**Development and drilling**

There was no drilling activity on the Elyzavetivske field during the year although new field development plans for both the Elyzavetivske field and West Klimavas licence were completed.

**Production facilities**

The Elyzavetivske production facility continues to operate efficiently and there have been no further changes.

**RUSSIA**

**Koshekhabskoye licence**

**Production**

Average production from the Koshekhabskoye field in 2016 was 6,082 boepd (2015: 4,670 boepd) comprising 56.1 MMcf/d of gas (2015: 57.7 MMcf/d) and 65 bpd (2015: 48 bpd) of condensate, a 30% increase on the average for 2015. This increase is due mainly to full year production from well 27 which came back on line in late 2015.

**Licence obligations**

The Group’s Russian operating subsidiary Yuzhnefteyazh neutrally manages a regulatory dialogue with Rosnedra, the licensing authority, to ensure that the authorities are kept abreast with progress on the field development and the associated exploration and reserves determination commitments.

Rosnedra, is fully aware that there are certain licence commitments now under YGE’s Koshekhabskoye licence which have not been met and has issued YGE with notices to this effect. YGE is addressing these issues and expects to resolve them in 2017.

**Development and drilling**

After completion of the well 27 workover at the end of 2015, there were no additional workover activities in 2016. Routine acid treatment has been carried out using coiled tubing on the main producing wells. Production from well 27 has declined from 175 MMcf/d to 141 MMcf/d through the year without any additional acid stimulation. During a routine wireline operation in the middle of the year a fish was lost in the hole which has prevented further acid stimulation taking place, but despite this production has remained relatively stable.

The north flank well 25 has been producing gas at rates between 5.5-12.4 MMcf/d with three acid treatments in the year. Well 27 has been producing gas at rates between 8.9-12.2 MMcf/d on a month by month average basis, having required eight acid treatments through the year. The deep east flank well 15 continues to produce at an approximate 0.6 MMcf/d on a monthly average basis.

**Production facilities**

There were no changes to the facilities in 2016. An unscheduled shut down of the plant in May was prolonged in order to complete the annual maintenance which had originally been planned for later in the year.

**Reserves audit**

A reserves audit was carried out by Deggendorf and Maunhilton in 2016 which increased total 2P reserves for the field to 80.3 MMboe (2015: 66.1 MMboe). Proved reserves have been slightly reduced, due to higher resolution geological modeling showing slightly less drainage area. Probable reserve categories have increased due to the undertaking of numerous activity in the new Callivinov well, which is planned for 2018, and net pay maps revealing volumes previously not accounted for by material balance.

**HUNGARY**

**Hajdunanas field**

Production from the Hajdunanas and Gornahaza Fields in north east Hungary, which form the Hajdunana IV Mining Plot, was suspended by the previous operator in 2013. In December, a sidetrack of the Ho-2 well was started to access the recovery horizon in the field. Gas sales commenced on 2 February 2017 at an initial rate of 1 MMcf/d, which is expected to increase on the average for 2015. Production forecasting and development planning is underway and further work may include a workover of the existing Ho-1 well to add production from the Lower Pannonian reservoir.

JKX continues to seek a farm-in partner to participate in the further development of the Hajdunanas field and the Group’s other Hungarian licence interests.

**Turkev IV Mining Plot**

During the year, JKX sold its 50% beneficial interest in the Ny-7 discovery (within the Turkev IV Mining Plot) to the operator.

**SLOVAKIA**

**Exploration**

JKX holds a 25% equity interest in the Svetlik, Medzihorov, Gubin and Pakovor exploration licences in the Carpathian field belt in north east Slovakia. A programme of magnetic-telluric geophysical surveys combined with seismic interpretation has led to the identification of a number of shallow prospects across the licences. The 128 sq km Pakovor licence was applied for and acquired in 2015 in protection around major prospects identified in the Metallbohrium licence, the Operator (DiscoveryOne) had planned to drill two of these prospects in 2016 but a combination of revised permits and procedures and local activist opposition has delayed well location permitting and construction. The operator now hopes to spud the first well of a larger well programme in 2017.
JKX OIL & GAS PLC (‘JKX’ OR THE ‘COMPANY’)

Half-Yearly Results
For the six months ended 30 June 2017

Highlights
- Executed Phase 1 of the appraisal program at Rudenkivske field and completed several enhancement projects in Ukraine
- Completed workover of well 25 in Russia
- Restarted production in Hungary after a break of more than 3 years
- Average production decreased by 17.3% at 8,598 boepd (2016: 10,393 boepd)
- Restructured and extended the short-term bond liabilities
- Commenced negotiations to resolve legal disputes with the Ukrainian Government
- Significant changes at the Board level following the Annual General Meeting

Key Financials
- Revenue: £38.0m (2016: £35.4m)
- Other cost of sales: £12.6m (2016: £9.7m)
- Loss from operations before tax and exceptional costs £2.2m (2016: £2.8m loss)
- Exceptional costs £3.1m (2016: £3.1m)
- Loss for the period: £7.7m (2016: £10.1m loss)
- Loss per share: 4.46 cents (2016: loss 5.86 cents)
- Operating cash flow: £4.0m (2016: £7.8m)
- Capital expenditure: £10.4m (2016: £2.2m)
- Total cash balance: £4.2m (31 December 2016: £14.3m)

Outlook
- Analysis of results of Phase 1 of Rudenkivske appraisal program and preparation for Phase 2 in Ukraine
- Progress of field development using best working and technical practices from North America adapted to Ukraine
- Successful completion of well 5 workover to increase gas production in Russia
- Workover of well Hn-1 in Hungary and search for farm-in partner
- Amicable settlement of the legal disputes with the Ukrainian Government
- Review of different options to raise external financing to enable execution of our strategy

Acting CEO, Victor Gladun commented:
“During the first half of the year, we have started implementing the Field Development Plans, completed Phase 1 of the appraisal program in the Rudenkivske field in Ukraine, completed well 25 workover in Russia and restructured the significant short-term bond liabilities.

On the Board level, continued disputes between major shareholders and the Board resulted in a change of the Executive Directors for the second time in 18 months. The Board is actively looking for new Executive and Non Executive Directors. I have taken on the role of Acting CEO to secure a smooth transition. Tom Reed acted as Advisor to the Board and Advisor to the Acting CEO and Russell Hoare served as Acting CFO from the date of the Annual General Meeting (‘AGM’) on 30 June 2017 until 31 July 2017 to help with the transition. Irrespective of changes in the management team, the Company will continue to seek to mitigate its litigation risks and potential liabilities with the Ukrainian Government, execute on Field Development Plans, and establish opportunities for long-term growth”.

1. Pre-exceptional earnings before interest, tax, depreciation and amortisation (EBITDA) is a non-IFRS measure and calculated using loss from operations of $5.3m (2016: $5.8m) and adding back depreciation, depletion and amortisation and exceptional items of $13.6m (2016: $14.2m). EBITDA is an indicator of the Group’s ability to generate operating cash flow that can fund its working capital needs, service debt obligations and fund capital expenditures.
2. Total cash is Cash and cash equivalents plus Restricted Cash.
3. Net cash/(debt) is Total cash less Borrowings (excluding derivatives).
4. Return on average capital employed is the annualised loss for the period divided by average capital employed.

**Ukraine revenues**

As the revenue bridge chart demonstrates, one factor affecting revenues from our Ukrainian business was the decreased production due to the suspension of enhancement activity in Ukraine in 2017 due to planning and preparation for the stimulation programme on the Rudenkivske field. Gas sales volumes in Ukraine were 7.6% lower at 3,453 boepd (2016: 3,737 boepd) as a result of reduced gas production to 3,766 boepd (2016: 4,114 boepd).

Whilst the realised gas price increased by 16% from an average of 5,208 UAH per Mcm in 2016 to 6,052 UAH per Mcm in 2017, US Dollar gas realisations in Ukraine improved only by 13.9% from $5.77/Mcf to $6.57/Mcf due to the 4.4% devaluation of the Hryvnia. Since the introduction of a new law affecting the Ukrainian gas market in 2015, gas prices are more closely following global market trends. The increase in gas realisations is explained by higher prices of imported gas from Europe compared to 2016.

Oil realisations also improved from $39.92/bbl in 2016 to $57.45/bbl in 2017 which is in line with Brent movement from an average of $41.21/bbl during the 1H 2016 to $52.28/bbl during the 1H 2017. Ukrainian realisations are now higher than Brent, with an average premium of $5/bbl in 2017, due to the removal of illegal cheap products from the Ukrainian market and robust local demand for oil exceeding local supply.

LPG sales were affected by both volume declines, associated with a reduced volume of gas produced, and an improvement in the market price achievable in Ukraine. The average price increased to $497.53/tonne (2016: $254.70/tonne) due to tight controls over customs clearance imposed by certain market players which resulted in a limited access of cheaper LPG products. However, the strong operational performance of the LPG plant enabled it to contribute $2.2m (2016: $1.3m) to Group revenue.

**Russia revenues**

Russian gas sales made up 54% of the Group’s volumes sold (2016: 56%). Gas production in Russia was lower by 25% to 4,654 boepd (2016: 6,222 boepd) largely due to the workover of well 25 in Russia and as the revenue bridge chart shows, this was the largest negative factor affecting Group revenues in the period.
Health, Safety, Environment and Security ("HSES")

The Group is committed to maintaining the highest HSES standards and the effective management of these areas is an intrinsic element of the overall business ethos. Through strict enforcement of the Group’s HSES Management System, together with regular management meetings, training and the appointment of dedicated safety professionals, the Group strives to ensure that the impact of its business activities on its staff, contractors and the environment is as low as is reasonably practicable. The Group reports safety and environmental performance in accordance with industry practice and guidelines.

Ukraine Operations

Asset Overview

Regal Petroleum Corporation Limited (a wholly owned subsidiary in the Group) holds a 100% working interest and is the operator of the MEX-GOL and SV fields. The licences are the Group’s sole project and extend over a combined area of 269 km², approximately 200 km east of Kiev. The two licences are adjacent and the interests are operated and managed as one field. The licences were granted in July 2004 and have a duration of 20 years.

The fields are located, geologically, towards the middle of the Dnieper-Donets sedimentary basin which extends across the majority of north-east Ukraine. The vast majority of Ukrainian gas and condensate production comes from this basin. The reservoir comprises a series of gently dipping Carboniferous sandstones of Visean age ("B-Sands") inter-bedded with shales that form stratigraphic traps at around 4,700 metres below the surface, with a gross thickness between 800 metres and 1,000 metres. Analysis suggests that these deposits range from fluvial to deltaic in origin. Below these reservoirs is a thick sequence of shale above deeper, similar, sandstones which are encountered at a depth of around 5,800 metres. These sands are of Tournasian age ("T-Sands"). Deeper sandstones of Devonian age ("D-Sands") have also been penetrated in the fields.

Production

The Group’s average production from the MEX-GOL and SV fields over the year ended 31 December 2015 was 144,783 m²/d of gas, 44 m²/d of condensate and 21 m²/d of LPG, which equates to a combined total oil equivalent of 1,274 boepd (2014: 152,744 m²/d of gas, 52 m²/d of condensate and 21 m²/d of LPG (1,370 boepd in aggregate).

Production was boosted by the commencement of production from the SV-6 well at the end of November 2015, with average gas, condensate and LPG production for December 2015 at 191,098 m²/d of gas, 46 m²/d of condensate and 21 m²/d of LPG (1,574 boepd in aggregate).

The Group’s average production for the period from 1 January 2016 to 30 May 2016 was 169,649 m²/d of gas, 42 m²/d of condensate and 20 m²/d of LPG, which equates to a combined total oil equivalent of 1,406 boepd.

Since the Group commenced the treatment of "wet" gas from the adjacent Lutsenky field at the beginning of July 2015, the Group has purchased 4,723,010 m³ of "wet" gas and following treatment of this gas, produced 2,945,021 m³ of gas, 778 m³ of condensate and 5,957 m³ of LPG (49,473 boe in aggregate).

Operations

The geopolitical upheaval, the volatility in the gas price, the devaluation of the Ukrainian Hryvnia, and the fiscal and economic uncertainty in Ukraine during 2015, meant that the Group considered it necessary to reduce its planned capital investment programme.

The revised programme during the year was limited to installation of the Lutsenky "wet" gas treatment infrastructure, undertaking workover operations on the SV-6 well, improvements to the Group’s gas processing facilities and pipeline network, and performing remedial work on existing wells.

The Lutsenky "wet" gas treatment project arose from an agreement with Pryrodni Resursy, the operator of the adjacent Lutsenky field, under which the Group has agreed to purchase "wet" gas and treat it through the Group’s gas processing facilities to strip out and sell the liquids. This has not only created an additional revenue stream for the Group, but also improved environmental emissions from the Lutsenky field.

The workover of the SV-6 well was undertaken after the Group entered into an agreement with NJSC Nadra, the State-owned gas producer, for the lease of the SV-6 well, which is a suspended well owned by NJSC Nadra, located within the Group’s SV licence area. Successful workover operations were performed during the year, and the well was brought onto production at the end of November 2015.
Operations
The geopolitical situation, the volatility in the gas price, the weakness of the Ukrainian Hryvnia, and the fiscal and economic uncertainty in Ukraine over recent years, meant that the Group considered it necessary to reduce its capital investment programme at the MEX-GOL and SV fields during 2016. The programme during the year was limited to the commencement of the drilling of the MEX-109 well, improvements to the Group’s gas processing facilities and pipeline network, and performing remedial work on existing wells.

However, during the year, the Group engaged P.D.F. Limited to undertake a comprehensive review and re-evaluation study of the geology, geophysics, petroleum engineering and well performance at the MEX-GOL and SV fields. The results of the study are now being utilised in the planning of the further development of the fields, both in relation to an improved understanding of the geological aspects of the fields and reservoir engineering, drilling and completion techniques. Reprocessing of existing seismic data, using the latest processing technology, is being undertaken to try to improve the definition in such data, and thereafter further interpretation work is planned.

The MEX-109 well was spudded at the end of July 2016, targeting the Visean reservoirs (“B-Sands”) in the MEX-GOL field. The well has been drilled to a depth of 4,873 metres, which is shallower than its original target depth of 5,250 metres following some technical issues during the drilling operations. As a result, it was decided to curtail the well at this depth as access to the main reservoir target had been achieved. The well may be deepened later to access deeper horizons. Completion operations are scheduled to be concluded in May 2017, after which well testing will commence, and subject to successful testing, it is hoped that the well will be hooked-up for production by the end of the second quarter of 2017.

Reserves
MEX-GOL and SV fields
The Group’s estimates of the remaining Reserves and Resources at the MEX-GOL and SV licence areas are derived from an assessment undertaken by independent petroleum consultants, ERC Equipoise Limited (“ERCE”), as at 31 December 2013 (the “ERCE Report”), which was announced on 25 March 2014. During the period from 1 January 2014 to 31 December 2016, the Group has produced 1.45 MMboe from these fields.
